  - Unskilled attendant/Unknown: 1%

- **Urban**
  - Skilled attendant: 99%
  - Unskilled attendant/Unknown: 2%

- **Rural**
  - Skilled attendant: 98%
  - Unskilled attendant/Unknown: 0%

**Institutional Delivery**

- **Total**
  - Institutional: 99%
  - Non-institutional/Unknown: 1%

- **Urban**
  - Institutional: 98%
  - Non-institutional/Unknown: 2%

- **Rural**
  - Institutional: 100%
  - Non-institutional/Unknown: 0%

Percentage of women age 15-49 years with a live birth in the last 2 years who were attended during their last pregnancy that led to a live birth at least once by skilled health personnel or at least four times by any provider.
Caesarian Section by Various Characteristics

Postnatal Care within 2 Days of Birth by Various Characteristics

Coverage of Newborn Care

Among the last live-birth in the last 2 years, percentage who were dried after birth; percentage who were given skin to skin contact; percentage who were bathed after 24 hours of birth; percentage who had their cord examined; percentage where the newborn received a least 2 postnatal signal care functions within 2 days after birth; and percentage of women with a live birth in the last 2 years who put their last newborn to the breast within one hour of birth.
The Montenegro Multiple Indicator Cluster Survey (MICS) was carried out in 2018 by the Statistical Office of Montenegro (MONSTAT) as a part of the global MICS programme. Technical support was provided by the United Nations Children’s Fund (UNICEF), UNICEF, the Government of Montenegro, and UNHCR provided financial support.

The objective of this snapshot is to disseminate selected findings from the 2018 Montenegro MICS related to Maternal and Newborn Health. Data from this snapshot can be found in tables TM.4.1, TM.4.2, TM.4.3, TM.6.1, TM.6.2, TC.7.1, TM.8.2, TM.8.4, TM.8.6, TM.8.7 and TM.11.5 in the Survey Findings Report. Further statistical snapshots and the Survey Findings Report for this and other MICS surveys are available on mics.unicef.org/surveys.
